Use Case Diagram Description

1.Admin

A. Delete account

Brief description: The admin deletes an account

Actors: Admin

Basic flow of events:

- 1. The actor logs into the system with the admin account
- 2. The system authenticates the actor and redirects to the Admin interface
- 3. The admin chooses to delete an account
- 4. The admin searches the account that he wants to delete
- 5. The admin deletes the account
- 6. The system deletes it from the Database
- 7. The admin leaves the system

Extensions:

- 1) The account does not exist
 - a) the system informs the admin that the account does not exist

B. Modify account

Brief description: The admin modifies an account

Actors: Admin

Basic flow of events:

- 1. The actor logs into the system with the admin account
- 2. The system authenticates the actor and redirects to the Admin interface
- 3. The admin chooses to modify an account
- 4. The admin searches the account that he wants to modify
- 5. The admin selects what he wants to modify
- 6. The admin enters the modified data
- 7. The admin leaves the system

- 1) The account does not exist
 - a) the system informs the admin that the account does not exist

2. Supplier Company

A. Update Timetable

Brief description: The Supplier Company want to modify the timetable

Actors: Supplier Company

Basic flow of events:

- 1. The actor logs into the system with the Supplier Company account
- 2. The system authenticates the actor and redirects to the Supplier company interface
- 3. The actor chooses to modify timetable
- 4. The actor enters the day and the time slot
- 5. The system modifies it in the Database
- 6. The actor leaves the system

Extensions:

- 1) The timeslot is not valid
 - a) the system informs the actor that timeslot is not valid
- 2) The inserted day is not valid
 - a) the system informs the actor that timeslot is not valid
- 3) The Supplier Company account details are not valid
 - a) the system informs the actor that username or password are wrong

B. Add product

Brief description: The Supplier Company adds a product

Actors: Supplier Company

Basic flow of events:

- 1. The actor logs into the system with the Supplier Company account
- 2. The system authenticates the actor and redirects to the Supplier Company interface
- 3. The actor chooses to add a product
- 4. The actor introduces the product details
- 5. The system stores the product
- 6. The actor leaves the system

Extensions:

- 1) The product fields are not filled
 - a) the system informs the actor that field is empty
- 2) The product name already exists from the same company
 - a) the system informs the actor that the product already exists
- 3) The Supplier Company account details are not valid
 - a) the system informs the actor that username or password are wrong

C. Delete product

Brief description: The Supplier Company deletes a product

Actors: Supplier Company

Basic flow of events:

- 1. The actor logs into the system with the Supplier Company account
- 2. The system authenticates the actor and redirects to the Supplier Company interface
- 3. The actor chooses to delete a product
- 4. The actor introduces the product Name
- 5. The system searches and deletes the product
- 6. The actor leaves the system

Extensions:

- 1) The product name does not exist in his list
 - a) the system informs the actor that the product does not exist in the list
- 2) The Supplier Company account details are not valid
 - a) the system informs the actor that username or password are wrong

3. Delivery Company

A. Take Order

Brief description: The Delivery Company wants to take an order

Actors: Delivery Company

Basic flow of events:

- 1. The actor logs into the system with the Delivery Company account
- 2. The system authenticates the actor and redirects to the Delivery company interface
- 3. The actor chooses to take an order
- 4. The system shows all active orders
- 5. The actor enters the order ID he wants to take
- 6. The system assigns the order to the actor
- 7. The actor leaves the system

- 1) The order list is empty
 - a) the system informs the actor that order list is empty
- 2) The inserted ID is not valid
 - a) the system informs the actor that ID is not valid
- 3) The Delivery Company account details are not valid
 - a) the system informs the actor that username or password are not valid

B. Finish Order

Brief description: The Delivery Company finishes an order

Actors: Delivery Company

Basic flow of events:

- 1. The actor logs into the system with the Delivery Company account
- 2. The system authenticates the actor and redirects to the Delivery Company interface
- 3. The actor chooses to finish order
- 4. The actor introduces the review he wants to give to the Customer
- 5. The system changes the status of the order and deletes it
- 6. The actor leaves the system

Extensions:

- 1) The delivery company has no active order
 - a) the system informs the actor that no active order exists
- 2) The Delivery Company account details are not valid
 - a) the system informs the actor that username or password are wrong

C. Cancel Order

Brief description: The Delivery Company cancels an order

Actors: Delivery Company

Basic flow of events:

- 1. The actor logs into the system with the Delivery Company account
- 2. The system authenticates the actor and redirects to the Delivery Company interface
- 3. The actor chooses to cancel an order
- 4. The system changes the status of the order and gives negative review to the Delivery Company
- 5. The actor leaves the system

- 1. The Delivery Company account details are not valid
 - a) the system informs the actor that username or password are wrong
- 2. The Delivery Company has no active order
 - a) the system informs the actor that there is no active order

4.Customer

A. Place order

Brief description: The Customer wants to place an order

Actors: Customer

Basic flow of events:

- 1. The actor logs into the system with Customer account
- 2. The system authenticates the actor and redirects to the Customer interface
- 3. The actor chooses to place an order
- 4. The system shows all products available
- 5. The actor enters the product name he wants to add to the order
- 6. The actor places the order
- 7. The system adds the order to the available orders list
- 8. The actor leaves the system

Extensions:

- 1) The product list is empty
 - a) -the system informs the actor that product list is empty
- 2) The inserted product name is not valid
 - a) -the system informs the actor the product name is not valid
- 3) The Customer account details are not valid
 - a) the system informs the actor that username or password are not valid

B. Finish Order

Brief description: The Customer finishes an order

Actors: Customer

Basic flow of events:

- 1. The actor logs into the system with the Customer account
- 2. The system authenticates the actor and redirects to the Customer interface
- 3. The actor chooses to finish order
- 4. The actor introduces the review he wants to give to the Delivery company
- 5. The system changes the status of the order and deletes it
- 6. The actor leaves the system

Extensions:

- 1) The Customer has no active order
 - a) -the system informs the actor that no active order exists
- 2) The Customer account details are not valid
 - a) the system informs the actor that username or password are wrong

C. Cancel Order

Brief description: The Customer cancels an active order

Actors: Customer

Basic flow of events:

- 1. The actor logs into the system with the Customer account
- 2. The system authenticates the actor and redirects to the Customer interface
- 3. The actor chooses to cancel an order
- 4. The system deletes the order and gives negative review to the Customer
- 5. The actor leaves the system

Extensions:

- 1) The Customer account details are not valid
 - a) the system informs the actor that username or password are wrong
- 2) The Customer has no active order
 - a) the system informs the actor that there is no active order

5.General

A. Register

Brief description: The user wants to register into the system

Actors: User

Basic flow of events:

- 1. The User selects to register the preferred actor into the system
- 2. The system redirects the user to the Register interface
- 3. The user fills the fields with personal details
- 4. The system creates an account with the specified details
- 5. The system redirects the user to the specific account interface

Extensions:

- 1) The username already exists
 - a) the system informs the actor that the username already exists

A. Register

Brief description: The user wants to login into the system

Actors: User

Basic flow of events:

- 1. The User selects to login into the system
- 2. The system redirects the user to the Login interface
- 3. The user fills the username and password field

- 4. The system verifies if the username exists and the existing password corresponds to the introduced
- 5. The system redirects the user to the specific account interface

- 1) The username or password incorrect
 - a) the system informs the actor that the username or the password are incorrect
